

**An Industry First by an Industry Leader**  
**RFID – The New Benchmark in Document Management Solutions**

Recall UK will be introducing an industry first with the planned launch of Radio Frequency Identification (RFID) technology. RFID tagging sets the standard for identification, inventory and tracking of customers' document and electronic data archives and adds a new layer of security and management efficiency to Recall's industry-leading document management solutions.

**New Best Practice**

RFID is a technology that uses radio waves to identify specific items with its breakthrough ability to read "through items". Challenging to do with the current barcode technology, RFID means that comprehensive audits are completed in a fraction of the time and with 99.9% accuracy. Cost-effective, error proof auditing that you can rely on – that is the Recall RFID advantage.

By tagging document archival cartons with passive RFID tags, and by using specially designed RFID equipment, Recall can provide annual inventory and audit reporting for its customers. Effectively eliminating costly, time-consuming physical audits that involve locating and moving each carton, RFID represents a quantum leap in inventory audit processes, enabling Recall to achieve perfect execution on behalf of its customers.

RFID tagging supports strict compliance regulations and global requirements such as Sarbanes-Oxley (SOX).

**Achieve New Efficiencies**

RFID offers increased efficiencies in transactional processes including faster turnaround time on report generation. Get the information you need to improve processes and performance and let RFID allow you to focus on your core business. In a matter of days, you will see how this technology can add strategic value to your company.

Recall customers can feel the utmost confidence that they are partnering with an industry leader with a commitment to providing innovation, security and service. And now you have the ability to request annual inventory audits on all cartons that have 100% of RFID tagged holdings.

**Sustainable Business Excellence**

Recall's innovative approach aims to increase customer service and provide peace of mind for all our clients.

By adopting RFID technology, customers will benefit from:

- Reduced labor requirements
- Ability to conduct comprehensive audits
  - With 99.9% accuracy
  - In a fraction of the time required for manual audit
- Mitigated risk
- Minimised "touch" of your valuable items
- Minimised human error

As the global leader in information management, Recall is committed to innovation, security and customer satisfaction. We are the best at what we do so you can be the best at what you do. We offer a consistent menu of services to securely manage your critical information.
